List of available services	10

This technical note aims to explain, step by step, how to configure Diris Digiware gateways to send data from slave modules to a generic MQTT cloud, AWS or AZURE.

INTRODUCTION TO THE MQTT PROTOCOL

The MQTT (Message Queuing Telemetry Transport) protocol is a low bandwidth communication protocol which is ideal for IoT (Internet Of Things) type applications.

This protocol is based on the publish/subscribe model which allows simplified communication between:

- **Publishing clients**, who post messages on a topic
- **Subscribed customers**, who subscribe to a topic to receive messages

Message management is then driven by a central broker (ie : Mosquitto, HiveMQ, EMQX, etc.)

This protocol is also used by more well-known clouds like AWS and AZURE

The MQTT protocol is compatible with the following gateways:

- Diris Digiware D-50v2
- Isom Digiware D-55
- Diris Digiware D-70
- Isom Digiware D-75
- Diris Digiware M-50
- Diris Digiware M-70
- Diris A-200

CONFIGURING THE DIRIS DIGIWARE GATEWAY

Prerequisites

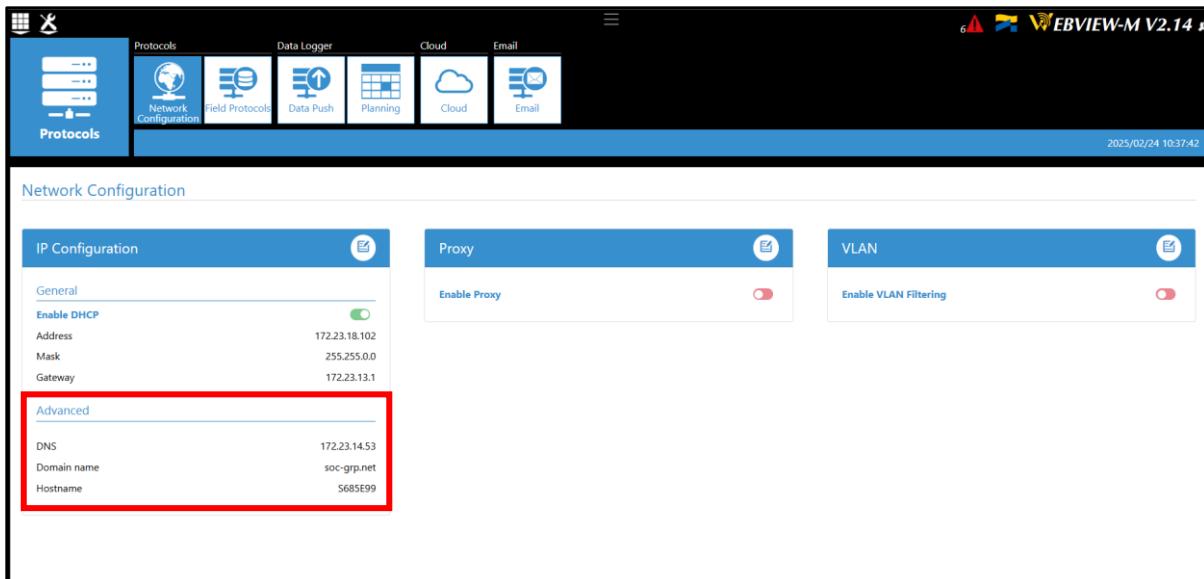

Before you can start configuring the MQTT protocol in the gateway, it is necessary to have:

- Connected the gateway to the network
- Auto-detected and configured slave modules
- Synchronized gateway topology with Webview-M/Web-config

DNS and SNTP servers must also be configured

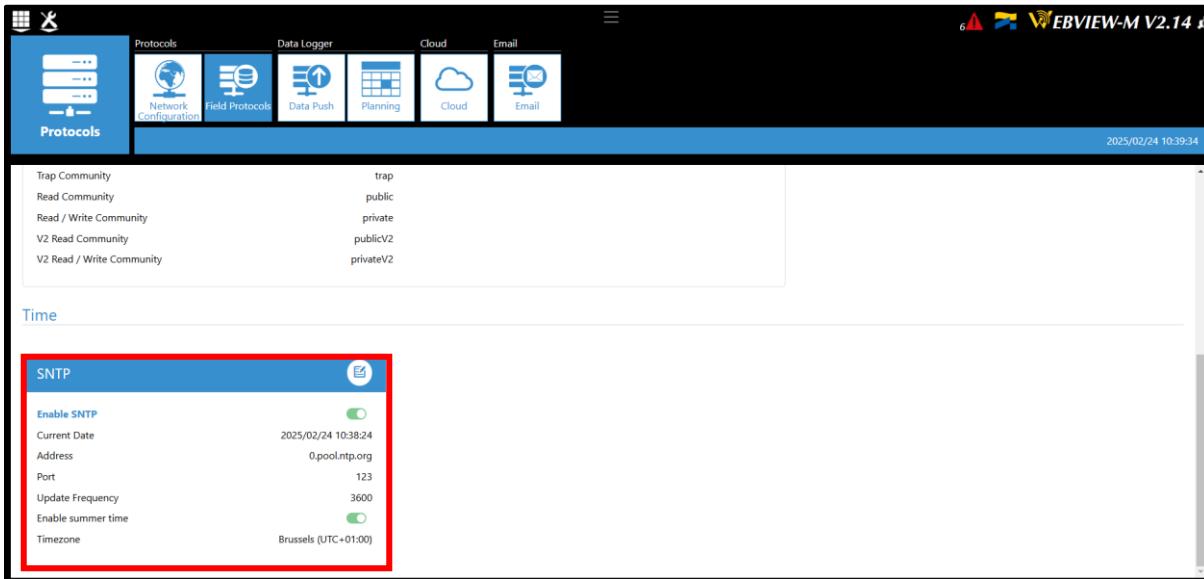

DNS Server Configuration

Go to settings, “protocols” menu then click on the “Network configuration” tile

SNTP Server Configuration

Go to settings, “protocols” menu then click on the “Field protocols” tile

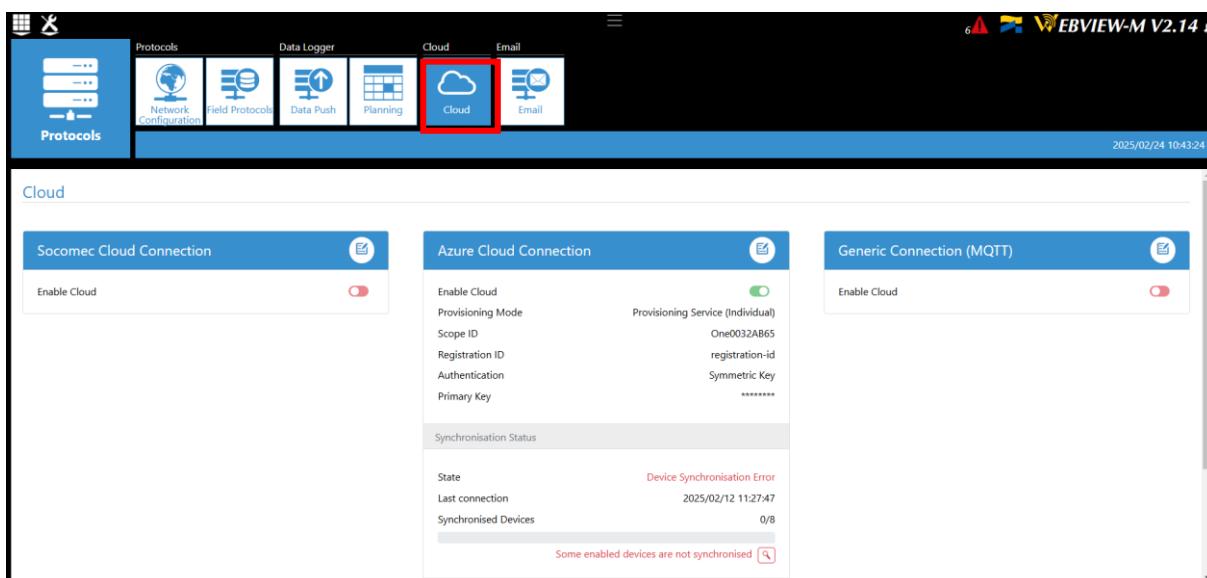

Generic MQTT Protocol Configuration

Configuring data sending to the MQTT cloud is done via the built-in Webview-M/Web-config web server.

Step 1: Connect to Webview-M in “administrator” or “cybersecurity” mode then go to the settings  and click on “Protocols”

Step 2: Click on the “Cloud” tile then on the edit button  in the “generic connection (MQTT)” section

Step 3: Activate the cloud connection and fill in the requested information, namely:

- The host name
- The port
- The topic
- The type of connection and authentication
- Username and password if authentication is desired

Click on validate to save the configuration

Generic Connection (MQTT)

X
✓

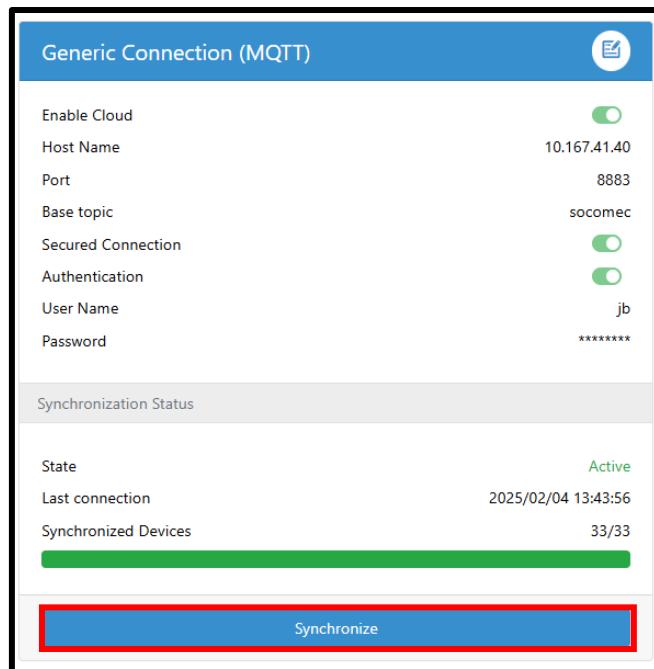

Enable Cloud		<input checked="" type="checkbox"/>
Host Name	10.167.41.40	
Port	1883	
Base topic	socomec	
		<input checked="" type="checkbox"/>
		<input checked="" type="checkbox"/>
User Name	jb	
Password	*****	
Synchronization Status		
State	Not Started	

Note 1: In case the connection is secure, it will be necessary to integrate the certificates in the gateway (menu " Cybersecurity ", tile " CAs ") and in the MQTT broker. **Warning:** the common name of the certificate must be the IP address or the hostname of the MQTT broker.

Authority certificate					
Delivered to	Delivered by	Expiration	Authority certificate type	Actions	
AlphaSSL CA - SHA256 - G2	GlobalSign Root CA	2024/02/20 11:00:00	HTTPS, SMTPS, FTPS	(i)	(p)
Baltimore CyberTrust Root	Baltimore CyberTrust Root	2025/05/13 00:59:00	HTTPS, SMTPS, FTPS	(i)	(p)
mqtt_qualif	mqtt_qualif	2025/11/20 16:28:23	HTTPS, SMTPS, FTPS	(i)	(p)
10.167.41.40	10.167.41.40	2026/01/06 14:52:15	HTTPS, SMTPS, FTPS	(i)	(p)
GlobalSign Root CA	GlobalSign Root CA	2028/01/28 13:00:00	HTTPS, SMTPS, FTPS	(i)	(p)
ISRG Root X1	ISRG Root X1	2035/06/04 12:04:38	HTTPS, SMTPS, FTPS	(i)	(p)
DigiCert Global Root G2	DigiCert Global Root G2	2038/01/15 13:00:00	HTTPS, SMTPS, FTPS	(i)	(p)
Amazon Root CA 1	Amazon Root CA 1	2038/01/17 01:00:00	HTTPS, SMTPS, FTPS	(i)	(p)
COMODO RSA Certification Authority	COMODO RSA Certification Authority	2038/01/19 00:59:59	HTTPS, SMTPS, FTPS	(i)	(p)
Amazon Root CA 2	Amazon Root CA 2	2040/05/26 01:00:00	HTTPS, SMTPS, FTPS	(i)	(p)

Note 2: If authentication is required, the username and password must be defined in the MQTT broker

Step 4: Click on "Synchronize" to synchronize the gateway slave devices with the cloud

It is possible to check the synchronization of the equipment by going to the “Diagnostics” menu, “Equipment” tile

Type	Name	Network ID	Address	IP Address	Network Type	Version	Date and Time	Option module	Cloud Synchronization	Cloud Uuid	Communication

AZURE Cloud Configuration

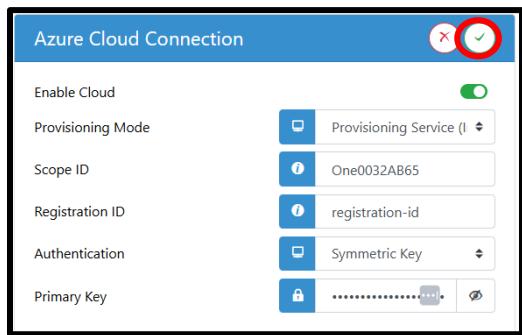

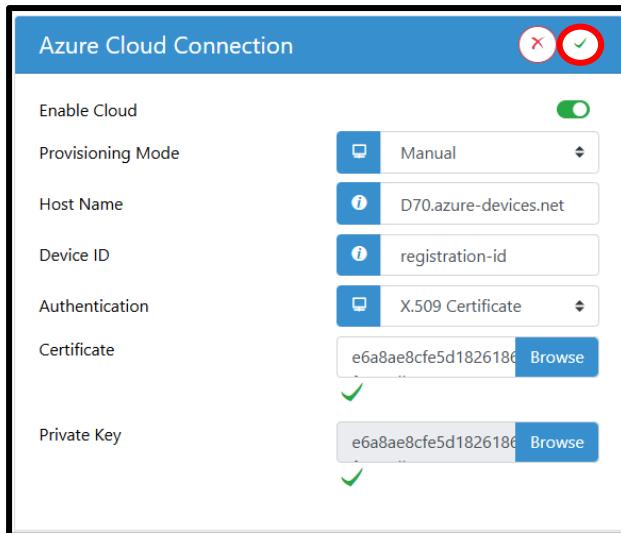

Digiware gateways also allow to send data to the AZURE cloud. The protocol used remains MQTT but the configuration differs slightly from generic MQTT

Steps 1 and 2 are the same as for [generic MQTT setup](#)

Step 3: Activate the connection to the AZURE cloud and fill in the requested elements, namely:

- The provisioning mode (Manual, Individual or Group)
- The hostname/Scope ID
- Device ID/Registration ID
- The type of authentication
 - o Symmetric key : Enter the primary key
 - o X.509 Certificate: Upload certificate and key or auto-generate certificate

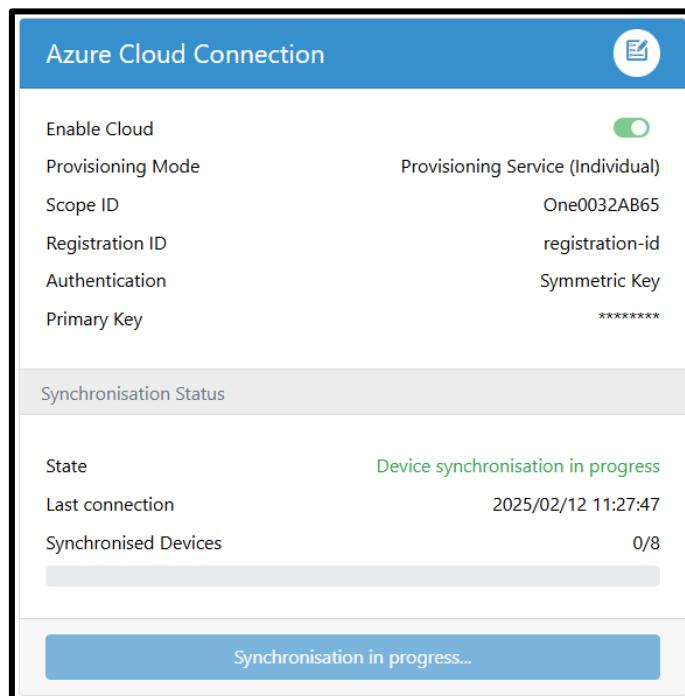

Click on validate to save the configuration

The screenshot shows two versions of the 'Azure Cloud Connection' configuration page. The left version has a red circle around the 'Validate' button at the top right. The right version has a green checkmark icon next to the 'Validate' button, indicating successful validation.

Azure Cloud Connection	
Enable Cloud	<input checked="" type="checkbox"/>
Provisioning Mode	Manual
Host Name	D70.azure-devices.net
Device ID	registration-id
Authentication	X.509 Certificate
Certificate	e6a8ae8cfe5d1826186 <input type="button" value="Browse"/>
Private Key	e6a8ae8cfe5d1826186 <input type="button" value="Browse"/>

Step 4: Click “Synchronize” to synchronize the gateway slave devices with the cloud

The screenshot shows the 'Azure Cloud Connection' configuration page with the 'Synchronisation Status' section expanded. A progress bar indicates 'Device synchronisation in progress'. Below it, the last connection date is listed as '2025/02/12 11:27:47' and the number of synchronized devices is '0/8'. A large blue button at the bottom says 'Synchronisation in progress...'.

Azure Cloud Connection	
Enable Cloud	<input checked="" type="checkbox"/>
Provisioning Mode	Provisioning Service (Individual)
Scope ID	One0032AB65
Registration ID	registration-id
Authentication	Symmetric Key
Primary Key	*****
Synchronisation Status	
State	Device synchronisation in progress
Last connection	2025/02/12 11:27:47
Synchronised Devices	0/8
Synchronisation in progress...	

AWS Cloud Setup

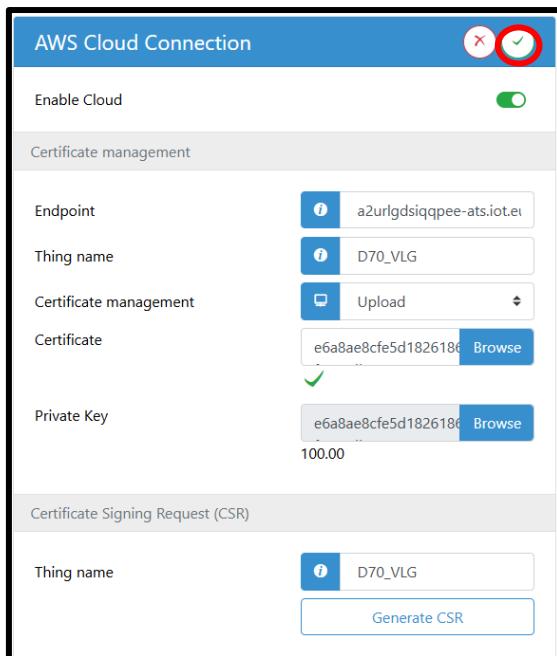

Digiware gateways also allow to send data to the AWS cloud. The protocol used remains MQTT but the configuration differs slightly from generic MQTT

Steps 1 and 2 are the same as for [generic MQTT setup](#)

Step 3 : Activate the connection to the AWS cloud and fill in the requested elements, namely:

- The endpoint address
- The Thing name
- Certificate management
 - o Upload: upload a certificate and its key
 - o Auto-generate: Generates a certificate to integrate into AWS
 - o Upload Signed Certificate: Upload a signed certificate from the AWS cloud from the generated CSR
- The Thing name to generate the CSR for the AWS cloud so that it can generate a signed certificate

Click on validate to save the configuration

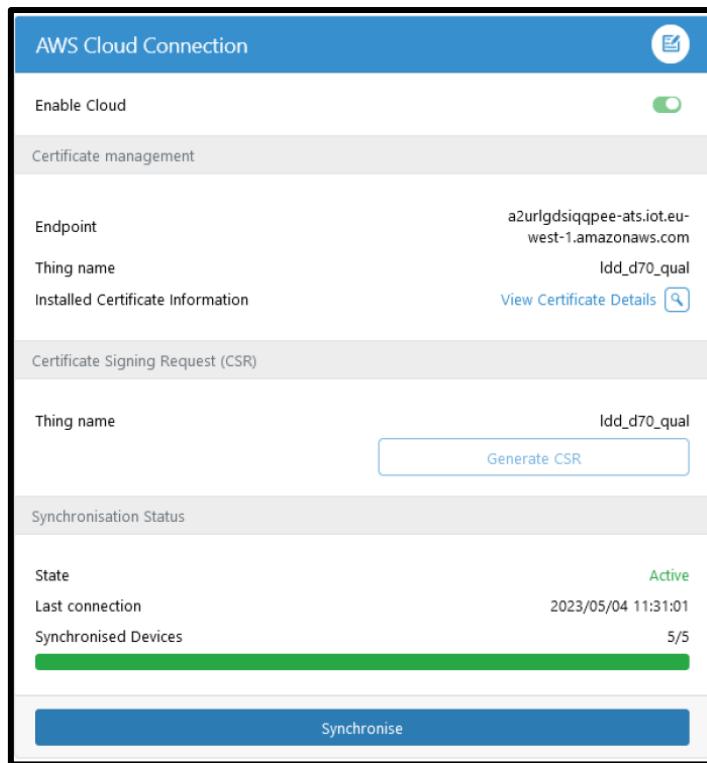

Note: There are 3 ways to integrate AWS certificates into the gateway:

- Allow AWS to generate a private key and public certificate, then upload them to the gateway (recommended)
- Allow the gateway to generate a private key and public certificate, then download them and upload it to AWS when creating the object

- Download a generated CSR from the gateway, sign it using AWS CA, and upload it back to the device. This method has the advantage of keeping the private key protected by not exposing it.

Step 4: Click “Synchronize” to synchronize the gateway slave devices with the cloud

Note : A [quick start guide](#) exist for the configuration of the AWS part

DECODING PAYLOADS

Payload Structure

The payloads sent are composed of:

- Timestamp in “Epoch Unix Timestamp” format (number of seconds since January 1, 1970)
- “measure” field that specifies the value of a service. See the “[list of available services](#)” section in the appendix. This field will always start with the load number followed by the service ID and its value. Below is an example

```
[{"utctimestamp": 1689853778, "measures": {"Load_0_30000": 300179000, "Load_0_30001": 511.9, "Load_0_30002": 682798000, "Load_0_30003": 650.8, "Load_0_30004": 10421000, "Load_0_30005": 60.4, "Load_0_30006": 902442000, "Load_0_30007": 626.7, "Load_0_30016": 1510049000, "Load_0_30017": 973.1, "Load_0_30008": 96000, "Load_0_30009": 349.0, "Load_0_30010": 451689000, "Load_0_30011": 25.0, "Load_0_30012": 10324000, "Load_0_30013": 710.5, "Load_0_30014": 450753000, "Load_0_30015": 600.2, "Load_0_105001": 26598316, "Load_0_30018": 300179000, "Load_0_30019": 511.9, "Load_0_30020": 682798000, "Load_0_30021": 650.8, "Load_0_30022": 10421000, "Load_0_30023": 60.4, "Load_0_30024": 902442000, "Load_0_30025": 626.7, "Load_0_30034": 1510049000, "Load_0_30035": 973.1, "Load_0_30042": 0, "Load_0_30043": 0, "Load_0_30076": 0.0, "Load_0_30044": 0, "Load_0_30077": 0.0, "Load_0_30045": 0, "Load_0_30078": 0.0, "Load_0_30046": 0, "Load_0_30079": 0.0, "Load_0_30047": 0, "Load_0_30080": 0.0, "Load_1_105000": 0, "Load_1_30000": 0, "Load_1_30001": 0.0, "Load_1_30002": 0, "Load_1_30003": 0.0, "Load_1_30004": 0, "Load_1_30005": 0.0, "Load_1_30006": 0, "Load_1_30007": 0.0, "Load_1_30016": 0, "Load_1_30017": 0.0}}, {"utctimestamp": 1689853778, "measures": {"Load_1_30000": 0, "Load_1_30001": 0.0, "Load_1_30002": 0, "Load_1_30003": 0.0, "Load_1_30004": 0, "Load_1_30005": 0.0, "Load_1_30006": 0, "Load_1_30007": 0.0, "Load_1_30016": 0, "Load_1_30017": 0.0}}, {"utctimestamp": 1689853778, "measures": {"Load_1_30000": 0, "Load_1_30001": 0.0, "Load_1_30002": 0, "Load_1_30003": 0.0, "Load_1_30004": 0, "Load_1_30005": 0.0, "Load_1_30006": 0, "Load_1_30007": 0.0, "Load_1_30016": 0, "Load_1_30017": 0.0}}]
```

Before this payload, a preamble with the topic entered, the gateway ID and the product UUID is sent.

Example: **socomec /M-70//message/data/f06189c0-7d0e-11cc-a716-393939393939**

The UUID of the products is available in the “Diagnostic” menu in the “Equipment” tile.

FEATURES OF THE GENERIC MQTT PROTOCOL OF GATEWAYS

Non-configurable features

- MQTT over TCP
- Version: MQTT 3.1.1
- Keepalive interval: 1200 seconds
- Client ID (UTF-8 encoded string with a maximum size of 127 bytes): Gateway name
- Data sending period: 10 min

Configurable features

- Hostname : standard or IP
- Port: 0 – 65535
- Topic: ASCII encoded string with a maximum size of 127 bytes. Example:
 - / my /root/ path
 - My /root/ path
 - My
 - / my
- Connection: Secure (TLS 1.2 with x509 CA Certificate in PEM format) or not
- Authentication
